

4th Grade Geometry Review

Across

- 3. part of a line that continues only in 1 direction
- 6. type of triangle that has 2 equal sides
- 10. angle that measures exactly 90 degrees
- 12. part of a line with 2 endpoints
- 13. quadrilateral with 1 pair of parallel sides
- 14. angle that measures more than 90 degrees
- 15. type of triangle that has 3 equal sides
- 16. polygon with 5 sides
- 17. geometric figure that continues forever in both directions

Down

- 1. quadrilateral with 4 right angles and 4 equal sides
- 2. lines that intersect at a right angle
- 4. point in which 2 rays meet to form an angle
- 5. lines that will never intersect
- 7. type of triangle with no equal sides
- 8. an exact location in space
- 9. angle that measures less than 90 degrees
- 10. quadrilateral with 4 equal sides, 2 obtuse, and 2 acute angles
- 11. quadrilateral with 4 right angles and opposite sides that are equal
