

# Biology Vocab

## Across

2. substances made from large molecules
5. building blocks of lipids
8. substance formed after a chemical reaction
11. building block for polymers
12. substance that provides H atoms
14. substance that solvent dissolves in
15. smallest unit of matter
16. macromolecule that is important to DNA&RNA
19. bond where electrons are donated
21. building blocks of proteins
23. biological catalyst
24. substance that can be added to speed up chemical reactions
25. substance changing in a chemical reaction

## Down

1. molecule that can dissolve in others
3. two or more atoms bonded together
4. a nonpolar macromolecule
6. amount needed to start a chemical reaction
7. mixture or solvent & solute
9. bond where electrons are shared
10. macromolecules consisting of amino acid chains
13. macromolecule consisting of CHO
17. substance that consists of 2 or more elements
18. Substance that cannot be broken down chemically
20. compound that produces H ions
22. molecule that lost a valence electron
