

Ecology

Across

- 2. an organism that cannot make its own food
- 4. describes non-living things in the environment
- 7. a biological community of interacting organisms and their physical environment
- 8. an organism that makes its own food
- 9. describes living factors in the environment
- 11. the variety of life in a particular habitat

Down

- 1. a species that influences the survival of many other species in an ecosystem
- 3. the largest population that an environment can support at any given time
- 5. consists of all life on Earth, including land, water, and the atmosphere
- 6. a group of organisms inhabiting the same region and interacting with each other

12. the study of how living things interact with each other and their environment

10. a group of ecosystems that share similar climates and typical organisms
