

Energy Forms

Across

2. Energy that is doing work or has the potential to do work
7. energy that is stored
8. Energy from inside the nucleus of the atom
9. energy in the form of motion
10. Electrical Energy comes from electrons moving from one atom to another

Down

1. Light comes from electrons changing energy levels in the atoms.
3. A natural resource that can be converted into other forms of energy in order to do useful work.
4. Heat is a form of energy from random vibrating atoms.
5. Chemical energy is stored energy that is released when chemicals combine.
6. Sound is energy from the vibrations of atoms that form a wave based on Compressions and

Rarefactions.
