

Geometry symbol

Across

- 5. - A closed shape with many straight sides.
- 6. - An up-and-down \angle line.
- 7. - Four-sided polygon like a square.
- 11. - Polygon with three sides and three \angle .
- 12. - A line connecting non-adjacent corners.
- 13. - Figures with proportional \angle but not same size.
- 14. - A closed shape with all points equidistant.

Down

- 1. - Triangle with two equal sides and angles.
- 2. - Lines that never \angle , like railroad tracks.
- 3. - Geometric shapes with \angle sides and angles.
- 4. - A sharp \angle across two rays.
- 5. - Lines that intersect at right angles.
- 8. - Distance from the center to the \angle of a circle.
- 9. - Polygon with six equal \angle .
- 10. - An angle > 90 degrees.
