Geometry Terms

Across

- **4.** a precise location or place on a plane
- **6.** an endpoint on one side and keeps going forever on the other
- 7. the perimeter of a circle
- **8.** the point where two rays or line segments meet to form an angle
- **10.** A line that splits an angle into two equal angles
- **12.** A geometric figure composed of points that are equidistant from a given point
- 14. three-sided Polygon
- 15. Two lines that cross

Down

- 1. four-sided shape where opposite sides are parallel and equal in length
- 2. A part of a line that has 2 end points
- **3.** A congruent 4 sided polygon, each angle is 90 degrees
- **5.** a line that goes from one point to another point on the circle but does not pass through the center
- 9. 90 degree angle
- **11.** two lines in a plane that do not intersect or touch each other at any point
- 13. less than 90 degrees

- **17.** extends indefinitely on all sides and is composed of an infinite number of points and lines
- 18. More than 90 degrees
- 19. 1/2 of the diameter
- **20.** two angles the sum of whose measures is 90 degrees
- **16.** The point from which all points on a circle are equidistant
