

# Networking and the Internet

## Across

3. A part of a computer system or network which is designed to block unauthorized access while permitting outward communication.
4. The process of transferring data between two or more digital devices
6. Facts and statistics collected together for references or analysis.

## Down

1. The ability of computers and the Internet to consistently perform to the expectations of their designed function.
2. The speed and resource usage involved in collecting, manipulating, and analyzing data.
4. The preservation of accuracy and consistency of a data set over the course of its analysis.

- 8. A global computer network consisting of multiple interconnected networks.
- 9. The study and practice of protecting computers and programs from unwanted access and theft of data.
- 5. A numerical label assigned to each computing device on a network.
- 7. A series of interconnected computers and devices that share resources and exchange data with each other.
- 8. The rate at which data is communicated from the Internet to a computer and vice versa.
